This loading device for cable drums allows a time-saving and safety storing and removal of cable drums, in and out of a dynamic cable drum storage.

Mode of operation:

This transport and loading accessory consists of two plat forms (extensions) which are put on the forks and fixed by clamping levers. By changing these accessories from the right to the left and vice versa they can either be used for small drums as well as for bigger ones.

The drum is simply rolled away on the floor. To avoid that the drum falls out, it must rest in centering position

Note: Perfect for forklifts with hydraulically adjustable forks
