

Pneumatic four-pronged device incl. Positioning Unit Table Top Unit incl. advanced Function

The tool **EXPANSORA QUATRO incl. Pull-off unit** is designed for large, heavy grommets. (Fire-wall-grommet, Car body grommet) In the standard size of the tool the degree of expansion is up to 100 x 100 mm. Larger expansions are possible.

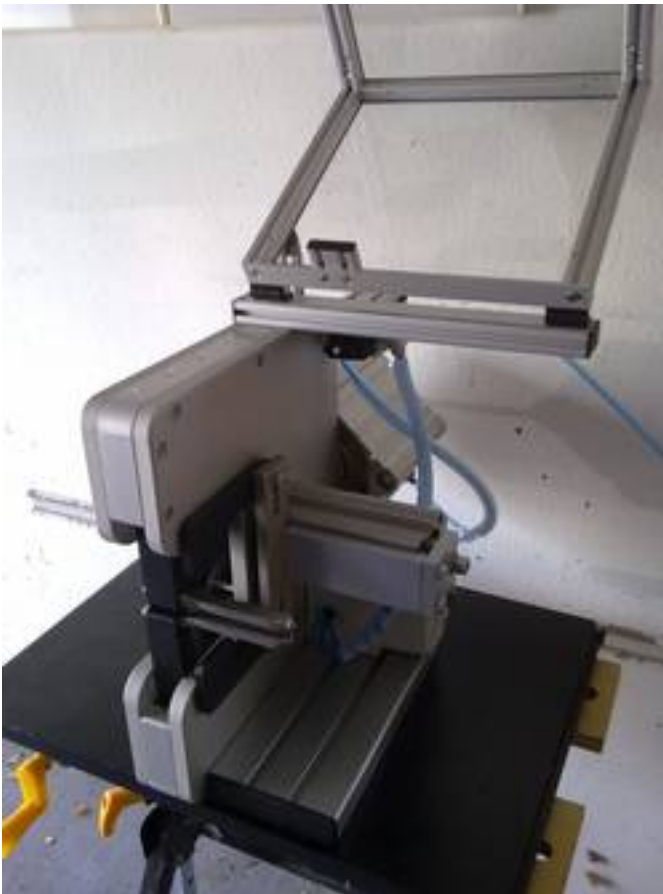

The grommet will be expanded carefully by activation of the tool. The speed and size of the widening is infinitely variable.

The grommet will be assembled reliably by activation of the **Pull-Off Unit**.

Expansora COVER / Schutzhaube

The activation of the tool is done automatically after closing the **cover**. The operation with the **cover-function** is similar to the standard tool **Expansora QUATRO inkl. Pull-Off Unit**.

The grommet will be slid on the prong set manually.

The wire harness incl. connector housing will be pushed through the widened opening. For this, it can be integrated with sensory or mechanical units at the tool.

The assembled parts can be removed. Time-controlled, the tool moves back to its basic position.
