

Pneumatic three-pronged device incl. Positioning Unit

Table Top Unit incl. advanced Function

The tool **EXPANSORA TRES** incl. **Pull-off unit** is a good useful additional option of the pneumatic table top device.

The grommet will be assembled reliably by activation of the **Pull-Off Unit**.

Until the right position is reached the cable or hose is easy to push through the widened opening. For this can be integrated sensory or mechanical units at the tool.

The assembled parts can be removed. Time-controlled the tool moves back in basic position.
